

## SSo Tool: Long-term decarbonization planification for large companies

### Sustainability Solutions: EMEAI

---

[ENGIE Impact](#) delivers sustainability solutions and services to corporations, cities and governments across the globe. Comprised of existing and proven ENGIE Group businesses, ENGIE Impact brings together a wide range of strategic and technical capabilities, to provide a comprehensive offer to support clients in tackling their complex sustainability challenges from strategy to execution. [Why join us?](#)

As a division of Engie Impact, the Advanced Analytics team focuses on the development of tools that are rooted in operational research (linear and nonlinear optimization) and machine learning. These tools support internal and external consultants and their applications cover for example: the operations of a district heating & cooling network, finding optimal investment pathways, designing net-zero factory roadmaps, and controlling hydro production.

Among these powerful tools, SSo Tool is a web-based planification software which models complex portfolios of clients with large number of sites all over the world, aiming to reduce their carbon emissions. The tool helps them turn their public carbon commitments into actionable decarbonization roadmaps, by scheduling campaigns of decarbonization levers, such as renewable energy production, electrification, e-fuels, storage, energy efficiency, etc.

### Ready to act Right Now, for Tomorrow?

---

#### Job Description

As part of the SSo Tool team, the Operational Research Analyst (Intern) will have to work on the different steps of Operational Research projects: understanding the client needs, write models in Python, construct heuristics to solve large problems in limited time, construct test data, industrialize methodologies, support and maintenance of the tool.

The suggested topics for the intern would be the following ones:

- Incremental Abatement Cost Curve: how to represent visually the efficiency of different levers towards the decarbonization objective?
- Storages & coupling constraints: how to manage constraints coupling multiple hours in an hour-by-hour dispatch heuristic?
- Industrial Load Profiling: how to break down yearly or monthly consumption of industrial processes into hourly consumption profiles?
- Julia translation: how could the mathematical core written in Python benefit from a rewrite in the Julia language?
- Data oracles: how to efficiently represent various data (costs, commodity prices, volumes...) along multiple hierarchical dimensions (geography, sectors, company entities, time) to support interpolation and extrapolation algorithms?

## Function

As **Operational Research Analyst (Internship)**, you will contribute to develop our activities on SSo Tool by:

- Defining, developing and validating optimization models in operational research where the goal is to improve assets management
- Ensuring a good integration of the mathematical model into the client environment (run as a service) or in a complete tool
- Producing dynamic visualizations of the results of our models

## Do you tick all the boxes?

We are looking for **talented and motivated people** to create the future of **sustainability transition**. Join a rewarding and flexible work environment that encourages innovation and creativity and help us meet the energy challenges of today and tomorrow.

- You are a master student in engineering with a solid applied mathematics background, a good basis and interest for IT (ideally Python for computer science)
- Having a good knowledge of mathematical modelling language is a plus (GAMS, ...)
- You have good analysis capabilities, easy to manipulate complex concepts
- Having knowledge of energy markets or operations is an asset
- You are fluent in English
- You are rigorous, autonomous and can take initiatives
- You have strong communication skills and are able to convince
- You enjoy teamwork in an agile environment

## Our offer

- An innovative working environment (NWOW) with a real flexibility
- The opportunity to discover a large group while remaining in a startup atmosphere
- Supported and coached by an international Agile team to improve your competences in Operational Research and IT
- This mission may lead to a stable, full-time position in an internationally reputed company
- Mission location: Louvain-La-Neuve, Brussels (Belgium)

- Duration: 4 to 6 months depending on the topic
- Start Date: beginning of 2024

## How to apply?

Send your CV and cover letter to [internships-AA@engie.com](mailto:internships-AA@engie.com)

### Equal Employment Opportunity
